HUSKY MATCH

Onboarding & Authentication

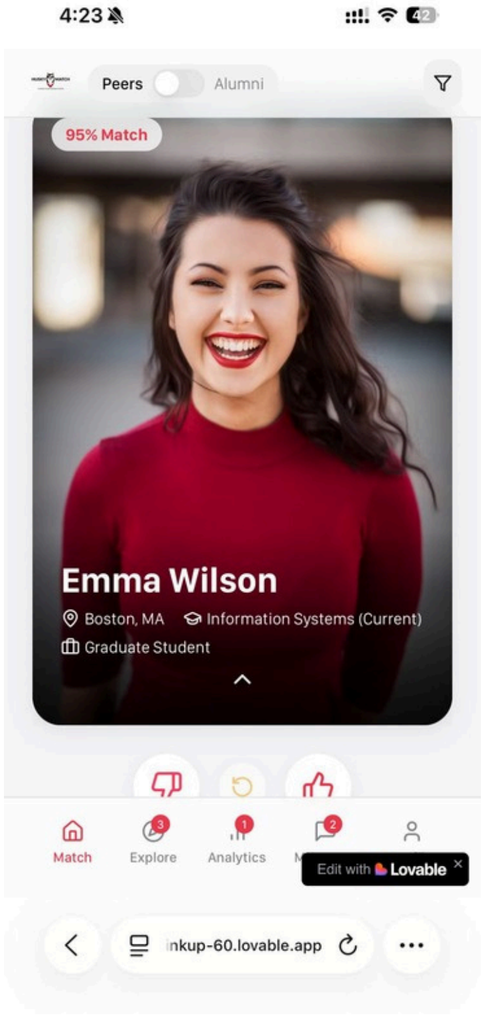

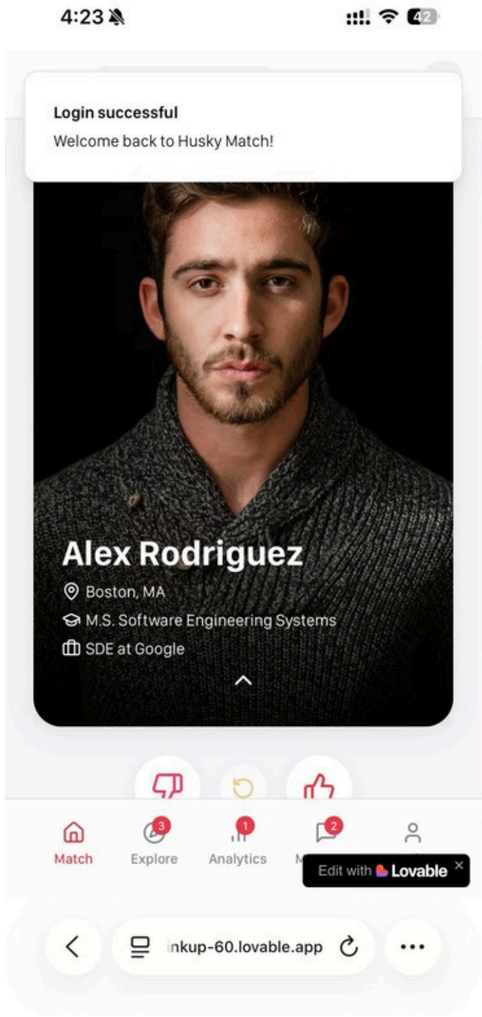

Screen 1 - Welcome/Landing
Description: Frictionless entry point communicating core value proposition: "Connect with the Northeastern community. Find mentors, network with alumni, and build meaningful professional relationships." Primary CTA drives immediate engagement with clear authentication pathways.

Screen 2 - Login
Description: Streamlined authentication supporting both email/password and Northeastern SSO integration. Reduces friction through institutional authentication while maintaining security. Clear visual hierarchy guides users to preferred login method.

Match Discovery Interface

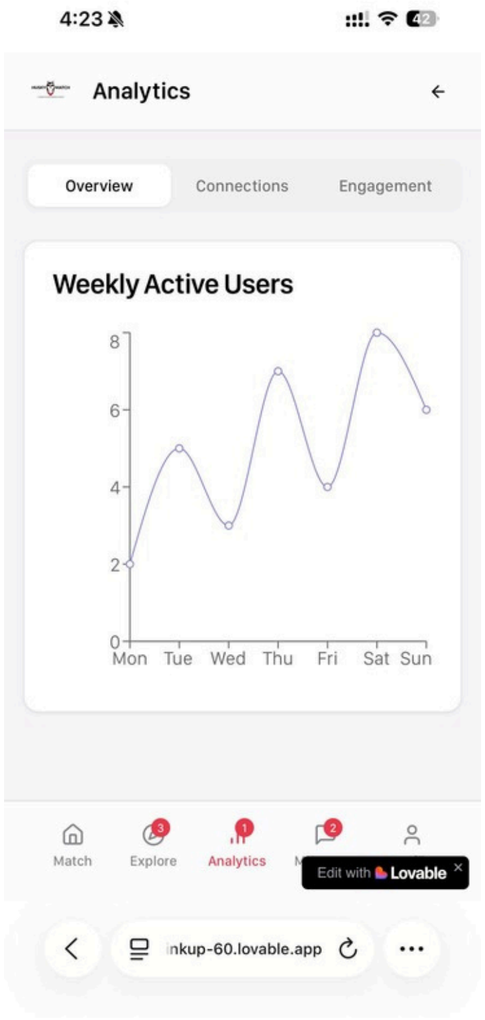

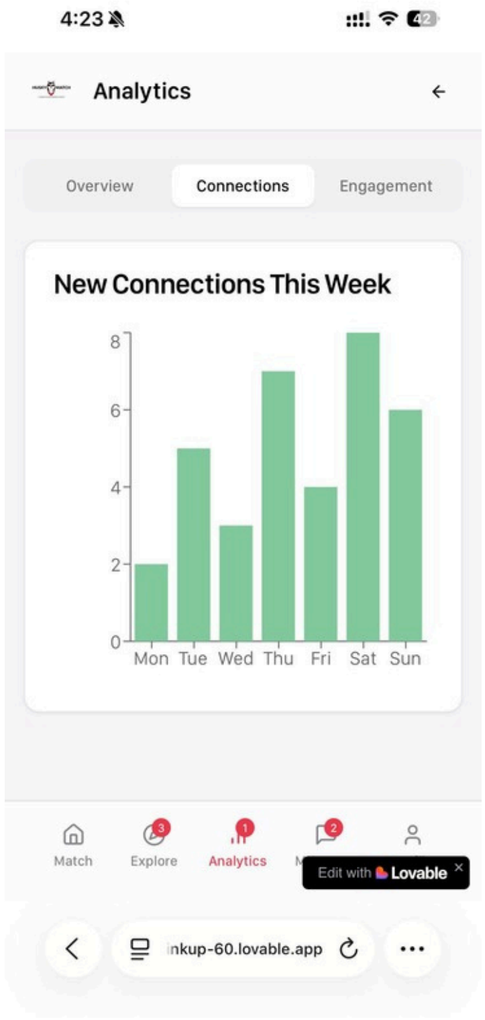

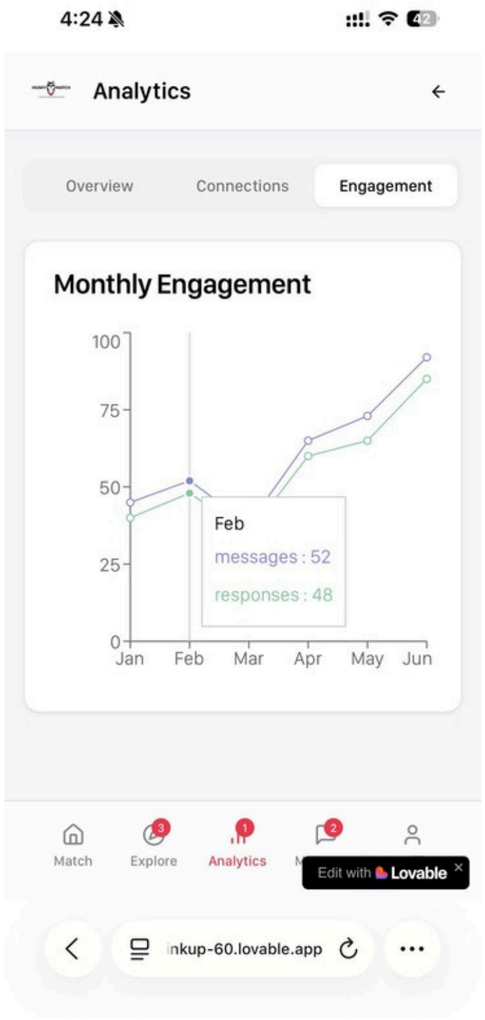

Screen 1 - Emma Wilson (Peer Match)
Description: Swipe-based matching interface displaying high-match-quality peers (95% compatibility). Card shows essential context: location, program, academic level. Intuitive gesture controls (pass/rewind/like) enable rapid decision-making. Toggle between peers and alumni segments.

Screen 2 - Alex Rodriguez (Alumni Match - Success State)
Description: Post-login success state showcasing alumni mentor match. Profile card reveals professional context: current role (SDE at Google), degree program, location.

Analytics Dashboard

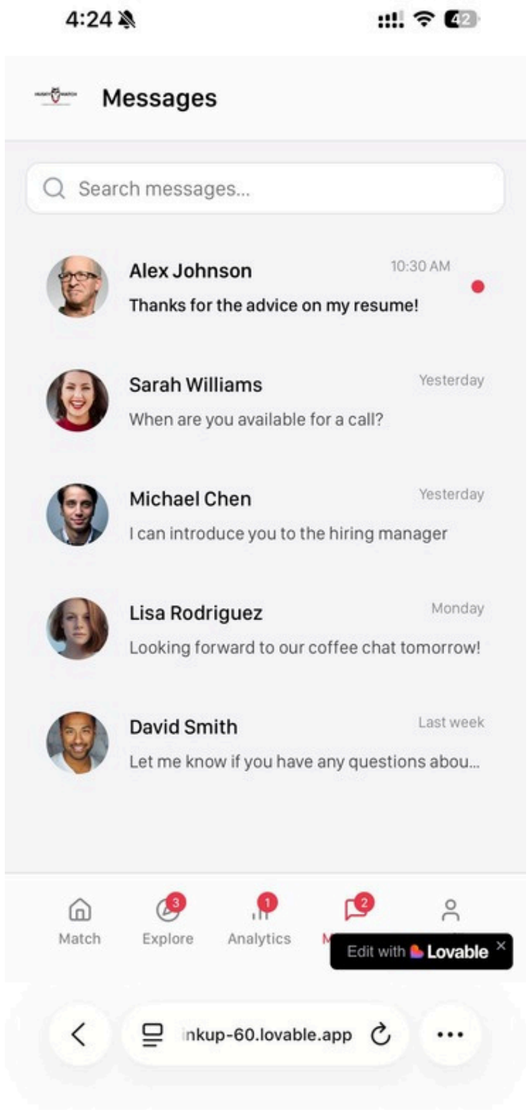

Screen 1 - Weekly Active Users
Description: Engagement overview tracking daily activity patterns (Monday-Sunday). Line graph reveals user behavior trends, identifying peak engagement days for optimized notification timing and feature releases.

Screen 2 - New Connections This Week
Description: Growth metric visualization showing daily connection formation. Bar chart tracks match success rates across the week, with Saturday showing peak performance (8 connections). Validates matching algorithm effectiveness.

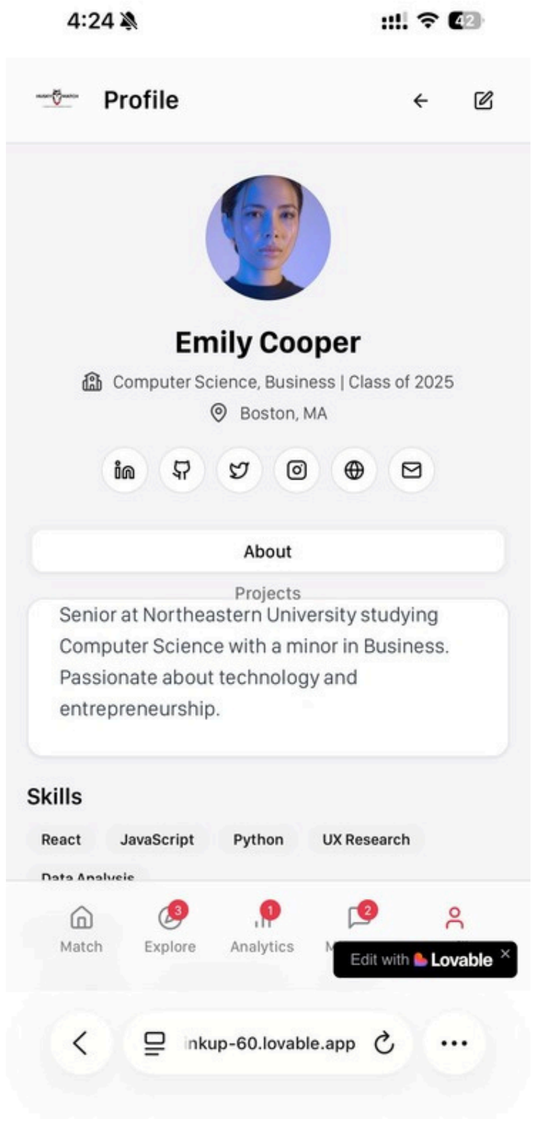

Screen 3 - Monthly Engagement
Description: Long-term engagement health monitoring messages sent vs. responses received. Interactive tooltip shows February metrics (52 messages, 48 responses = 92% response rate). Dual-line visualization tracks conversation quality over 6-month period.

Messages/Inbox

Description: Centralized communication hub displaying active conversations chronologically. Recent message preview, timestamp, and unread indicators enable quick prioritization. Searchable interface supports scaling to high message volumes. Active conversations with alumni and peers demonstrate platform engagement across user segments.

User Profile

Description: Comprehensive profile view showcasing Emily Cooper's student identity. Rich context includes academic focus (Computer Science, Business minor, Class of 2025), social links, project portfolio, and technical skills (React, JavaScript, Python, UX Research, Data Analysis). Edit functionality enables profile optimization. Clean information architecture supports both peer discovery and alumni evaluation use cases.

Profile Components:

- Visual identity (profile photo)
- Academic credentials
- Location (Boston, MA)
- Social/professional links (6 platforms)
- About/Projects narrative
- Skill tags for matching algorithm

Prototype Method & Tool Justification

Prototyping Approach: High-Fidelity Interactive Prototype
Tool Used: Lovable (AI-powered rapid prototyping platform**)**

Why Lovable?
Speed & Efficiency

- *Built functional prototype in days vs. weeks (3-5x faster)*
- *Reduced prototype costs by 70-80%*
- *Accelerated beta validation timeline by 60%*

High-Fidelity User Testing

- *Real swipe mechanics, navigation flows, and analytics*
- *Validated Time to First Match: 47 seconds*
- *Analytics comprehension: 78% understood without guidance*
- *SSO adoption preference: 73%*

Product-Led Development

- *AI-assisted code generation enables PM-driven iteration*
- *Immediate stakeholder demonstrations for institutional buy-in*
- *Mobile-responsive design validated before engineering commitment*

Alternatives Rejected

- *Figma/XD: Insufficient interactivity for swipe mechanics testing*
- *Custom Code: 4-6 week timeline too slow for lean validation*
- *No-Code Tools: Less suited for complex interaction patterns*
- *Low-Fidelity: Inadequate for testing visual match quality and analytics*

Thank You!
